Subject: KWMU Interview

...went fine. Stressed that while the 2008 ROD's prime threat considerations were those related to seismic and flooding events, it's far more relevant for everyone to remember that now, five years later, under the current review and investigation, EPA has tasked the PRPs to consider an even more comprehensive range of issues—including the subsurface event in adjacent Bridgeton Landfill, obviously—as well as seismic, flooding and tornados. All of these issues will be fully considered as the time comes for EPA to select a final remedy.

Veronique was gracious, as usual.
